

Learning from Insulators

New Trends in the Study of Conductivity of Metals

Since participants to the workshop are affected by rather different time zones, the workshop has been split in three parts:

1. pre-recorded **mini courses**, which will be made available before the workshop
2. **core program**, taking place on a time that allows all participants to attend
3. **encore program**, which allows participants from different time zones to actively take part

In all the timetables below, the times are shown with respect to the CET (Europe/Amsterdam) time zone.

Mini courses

The following mini courses (titles are indicative) will be published in advance:

1. *Classical mechanics and transport* (Andreas Knauf)
2. *Semiclassical methods for electronic transport* (Max Lein)
3. *Algebraic methods for interacting systems* (Sven Bachmann)
4. *Disordered quantum systems* (Christian Sadel)

The aim of the mini courses is to level the knowledge of the participant and provide the necessary background to understand each other's language. Depending on the availability of the speakers these may be in the form of pre-recorded lectures, lecture notes or curated reading lists.

Core program

Additional details, like speakers, titles and abstracts of the talks will be added in the upcoming weeks.

Time	Monday <i>overview</i>	Tuesday <i>non-commutative</i>	Wednesday <i>random</i>	Thursday <i>semiclassical</i>	Friday <i>classical</i>
